

DRUVAN G N

Trainee Engineer (SDE1) | Backend / Agentic Systems

Mysuru, India | Bangalore (HashedIn)

druvangurukar20@gmail.com | [+91 63619 67951](tel:+916361967951) | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

SUMMARY

Backend engineer focused on distributed, event-driven systems and API design under evolving business rules - building REST APIs and microservices in Java/Spring Boot and Python/FastAPI, and modeling long-running workflows as explicit, recoverable state machines (LangGraph checkpointing, human-in-the-loop review gates). Comfortable owning a system end-to-end: system design, authentication/authorization (JWT, OAuth, OWASP), data layers, and cloud deployment (GCP). Currently building production multi-agent platforms at Hashedin by Deloitte; drawn to problems in reliability, correctness, and scale.

CORE SKILLS

Backend & Systems: Java - Spring Boot - Python - FastAPI - .NET/C# - REST APIs - Microservices - System Design - Distributed Systems - Event-Driven Architecture (Kafka) - State Machines / Workflow Orchestration (LangGraph)

Reliability & Security: JWT / OAuth - OWASP - Idempotency & Retry Handling - Checkpointed Recoverable Workflows - Observability (LangSmith, MLflow)

Data & Infra: SQL - MySQL - PySpark - Databricks - ChromaDB - Vector Search - Docker - Git/GitHub - Jenkins - CI/CD - GCP

Applied AI: LangChain - LangGraph - RAG - Multi-Agent Systems - Deep Agents - Agentic RAG - MCP

EXPERIENCE

Trainee Engineer (SDE1) - Hashedin by Deloitte April 2026 - Present | Bangalore, India

Nexus Copilot - Agentic RAG on Databricks

Databricks, Agentic RAG, Vector Search, MLflow 3, Lakeflow Jobs, MCP

- Built an agentic RAG app that ingests software requirements into a synced Vector Search index and equips LLMs with tool-calling (SQL execution, web search, Managed MCP).
- Graded agents with MLflow 3 and scheduled the pipeline via Lakeflow Jobs; hosted as a serverless Databricks App.

ETL Migration Intelligence

Python, LangChain, LangGraph, Deep Agents, PySpark, GCP, ChromaDB, LangSmith

- Core contributor on a multi-agent AI platform automating legacy ETL modernization for enterprise data pipelines on GCP - each stage runs as a discrete, observable agent step.
- Built the retrieval layer on PySpark and ChromaDB and instrumented the system end-to-end with LangSmith so every agent decision is traceable.

AI Agent Factory - Document

FastAPI, LangGraph, WebSockets, SSE, ChromaDB, SQLite

- Designed a document-to-code pipeline covering three agentic workflows, each modeled as an explicit, recoverable state machine with LangGraph checkpointing.
- Built human-in-the-loop review (WebSockets, SSE) so long-running tasks can pause for review and resume reliably after failure or restart.

FoodieHub - Food Delivery

.NET 8, C#, JWT, OWASP, RBAC

- Independently designed and built a food-delivery backend end-to-end in .NET 8/C#, including JWT auth, RBAC, and OWASP-hardened APIs across changing order-state business rules.

Smartwatch Leaderboard

Spring Boot, Java 17, Kafka, MySQL, JPA / Angular 20 + NgRx

- Owned the backend for a real-time leaderboard service with Kafka event flow for device feature-tag matching and geo-scoped challenges; exposed a clean REST contract to an Angular 20 + NgRx client.

ADDITIONAL PROJECT

Job Portal - Full-Stack Web App

Java, JDBC, MySQL, React
